

EXPEDITIONARY WARFARE COMMAND AND CONTROL

UNLEASHING FURY FROM THE SEA

Fury is only effective when delivered with control and precision. ThalesRaytheonSystems is uniquely positioned to enable the Aviation Combat Element commander to focus aviation assets in support of MAGTF operations through a set of powerful command and control tools.

In the hands of Marines, our tested and proven capabilities will readily support offensive air support, air assault support, anti-air warfare, and air traffic control missions. In addition, we can deliver capability by echelon from MEU to MEF.

ThalesRaytheonSystems, World-leading provider of C2 systems for more than 45 years.

EXPEDITIONARY WARFARE COMMAND AND CONTROL

Meeting the Challenge

ThalesRaytheonSystems, a U.S. defense company holding a Top Secret facility clearance in Fullerton, Calif., has more than 45 years experience designing, developing, fielding, and sustaining command and control systems. With its Expeditionary Warfare expertise and on-site test bed capability, ThalesRaytheonSystems can design, develop, and modernize command and control equipment and systems to meet evolving requirements.

- Operational systems of record fielded worldwide
- World-class CMMI Level 5 engineering processes
- Strong history of integrating complex command and control systems

A Position of Excellence

The ability to integrate technically compliant components with a low risk is solely a function of experience and success. ThalesRaytheonSystems and its parent company, Raytheon, are the Original Equipment Manufacturer for many components currently utilized by the U.S. military and has a history of integrating a variety of components to meet each customer's unique needs and requirements.

- AFATDS, operational since 1996
- CEC, in production since 2002
- BCS, USAF air defense system of record for North American air defense since 2006

A History of Success

ThalesRaytheonSystems has developed and deployed mobile and fixed command and control systems for allied forces around the world. Our successful legacy will bring low-risk, reduced life-cycle costs and proven success to the Marines.

- Modularity
- Scalability
- Transportability

A Reputation of Reliability

From our first fielded C2 system in 1964 to guarding the skies of North America today, there are more command and control systems fielded around the world today from ThalesRaytheonSystems than any other company. ThalesRaytheonSystems' Battle Control System (BCS) is the primary air defense/battle management system for North American Air Defense (NORAD) and the U.S. Pacific Command.

- Data management from multiple sources, links and agencies
- Constant situational awareness, threat identification and decision support
- Threat tracking over North America from a single air defense sector

An Expeditionary Warfare Team for the Future

ThalesRaytheonSystems is leading a team of industry experts to provide the most proven, low-risk and robust solutions to the Marines. ThalesRaytheonSystems is ready to demonstrate to the USMC the essential solution to meet their needs in a rapidly changing threat environment. ThalesRaytheonSystems can deliver capability by echelon from MEU to MEF.
